ABSTRACT

One of the important components of the nurse's role is teaching of clients, patients and their families. The nurse should be adequately prepared to assume this responsibility. Inadequacy of the nurse as a teacher is one of the reasons for patient's teaching failure. The solution suggested is to educate nurses to be better teachers. Training program constitute one of the tools which can help nurse interns and other nurses to be effective teachers. The purpose of this study was to investigate the effect of carrying out a Training Program on nurse interns' role as health educators. Sixty nurse interns at the High Institute of Nursing, Ain Shams University were randomly chosen and randomly assigned to study and control groups. The training program was administered to the study group only. Findings revealed significant differences between the two groups in cognitive pre and post test scores between the two groups. Also, the study group performed health teaching more often than the control group.

ACKNOWLEDGEMENT

I wish to express my sincere thanks and deep gratitude to Professor Dr. Mohammed Sadek Sabour for his guidance and encouragement in completing this work.

I would like to deeply thank Prof. Dr. Cheherezade Ghazi for her indispensable help, valuable advice and support.

Special thanks are also extended to Dr. Fatma Handy for her constructive criticism, understanding, support, and encouragement.

I would like also to express my gratitude to Professor Dr. Amal Samy Ibrahim, Professor of Medical Statistics and Epidemiology, National Cancer Institute, Cairo University for his sincere help and advice.

I am especially indebted to my family members; husband, parents and children. I would like also to extend my sincere appreciation to the nurse interns who participated in this work.

Last but not least, I am quite grateful to all those who helped me to accomplish this research. This especially goes to the library staff at both the High Institute of Nursing of Ain Shams University and Cairo University.
