ACKNOWLEDGEMENT

First of all my deepest gratitude and thanks to Allah the most Greatful, the most Merciful.

I would like to express my extreme thanks, appreciation and profound gratitude to Professor Dr. Mohammed Naguib Hassan Professor of General Surgery, Faculty of Medicine, Ain Shams University, for his kind supervision, careful guidance, endless patience, great effort and continuous help throughout the course of this work.

I would like also to express my ever lasting gratitude and sincere thanks to Professor Dr. Amr Ahmed Abdel Aal Assist Professor of General Surgery, Faculty of Medicine, Ain Shams University, for his valuable advice, less support, kind supervision, continuous encouragement and generous help throughout the whole work.

Finally, I wish to thank Professor Dr. Amr Kamel Elfiky, Assist Professor of General Surgery, Faculty of Medicine, Ain Shams University, his great help, suggestions, efforts, encouragement and support helped to put this work in its final shape.

AIM OF THE WORK

The aim of this work is to be a research about traumatic diaphragmatic injury, controversial management and diagnosis, including different methods for diagnosis, different surgical approaches, endoscopic interference and recent trials in surgery. Revising the texts available in the field, the surgical books and journals and exploring the medical net sites concerned with the subject to make an updated essay.
